

Update on OSSii (OSS Interoperability Initiative)

An illustration featuring a white bridge with a railing. Several stylized business figures in purple suits are walking across the bridge. One figure on the left carries a briefcase, another carries a laptop, and one in the center holds a megaphone. On the right, a figure carries a globe on their head, and another talks on a mobile phone. The background is a light beige color. Below the bridge, there are large, stylized blue shapes that resemble abstract faces or buildings, with yellow circular accents.

**NGMN Meeting
Singapore, 27/28th January 2015**

**Anil Dua, Ericsson
Juha Roysko, Nokia
Mathias Gabrysch, Huawei
(version 1.0)**

OSS paradigm

What is OSSii

An initiative by **Ericsson, Huawei and Nokia** to enable interoperability between their, and 3 party OSS systems for **reducing integration costs and promoting competition**

A **commitment to offer licensing of their existing OSS interfaces** for the purpose of development, manufacture and sale off functionality,

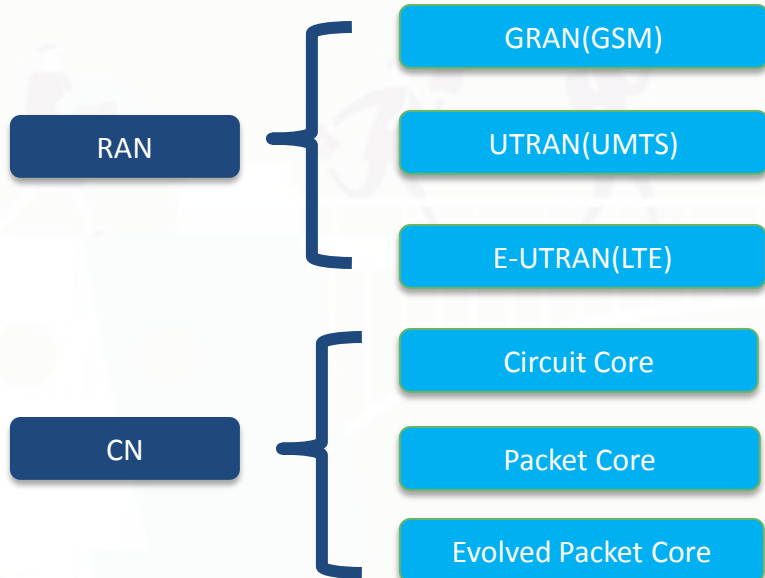

- 1) to one another,
- 2) to 3rd parties subject to reciprocity (NEPs) or
- 3) to 3rd parties on fair and reasonable terms (ISVs without own OSS interfaces)

A **complementary to standardization**, enabling interoperability by using the vendors' existing interfaces

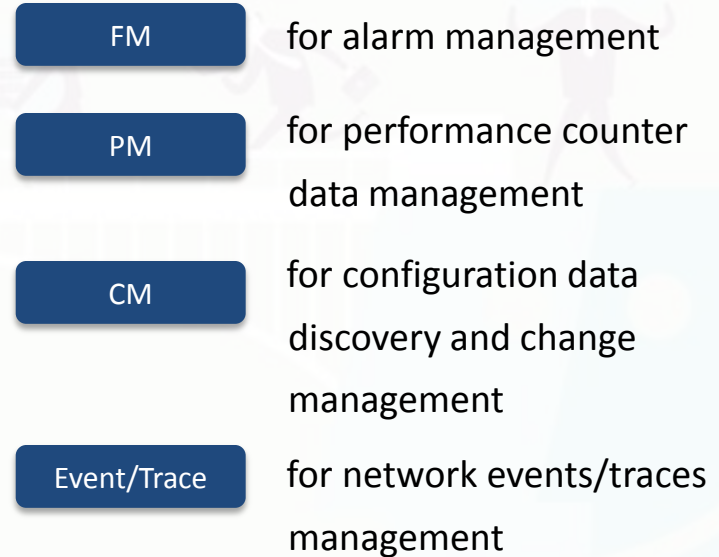

An “initiative” instead of an industry body, forum or organization
The MoU made public available through a web portal

What is the Scope of OSSii

Involved Network Equipments Class

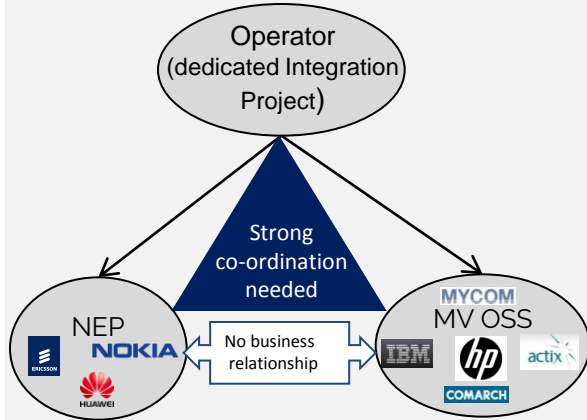

Involved Network Interfaces Class

OSSii speeds up time to market

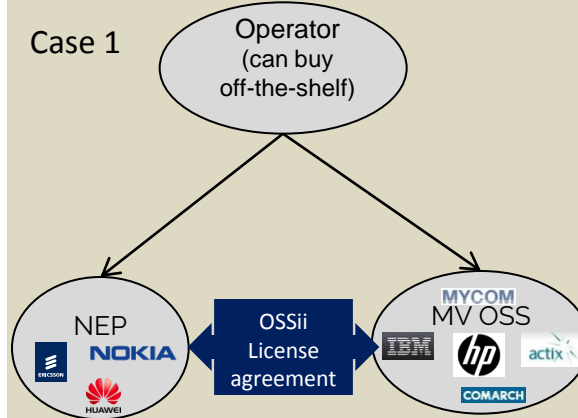

Without OSSii:

- According to Supplier agreements
- Operator needs to „moderate“ between NEP and MV OSS Vendor
- No pre-integration possible
- Each case is treated as a separated project

With OSSii:

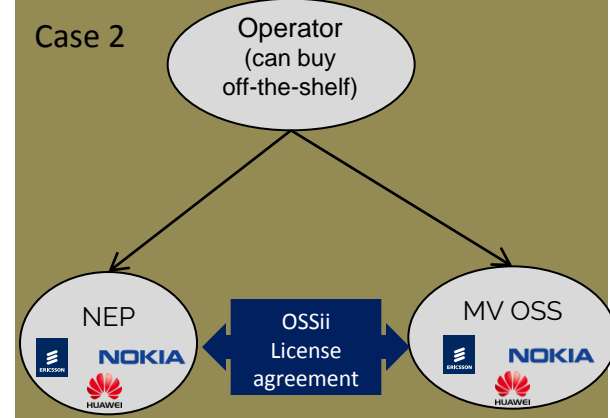

Case 1

- No co-ordination by the operator needed
- Operator can buy „off-the-shelf“
- Pre-integration/testing possible

With OSSii:

Case 2

- No co-ordination needed by the operator
- NEPs exchange NBI info between each other
- Operator can buy „off-the-shelf“
- Pre-integration/testing possible

Major Benefits for Operators

- Remote Testing Services are provided by all 3 vendors
- Lifecycle management is provided for the interfaces under OSSii
- Pre-verified OSS products for the new network releases

Higher integration efficiency
Speed up time to market
Lower integration costs

Major Benefits for 3rd Parties

- Remote Testing Services are provided by all 3 vendors
- Lifecycle management is provided for the interfaces under OSSii
- Visibility of vendor roadmaps and changes in advance
- Pre-verified OSS products for the new network releases

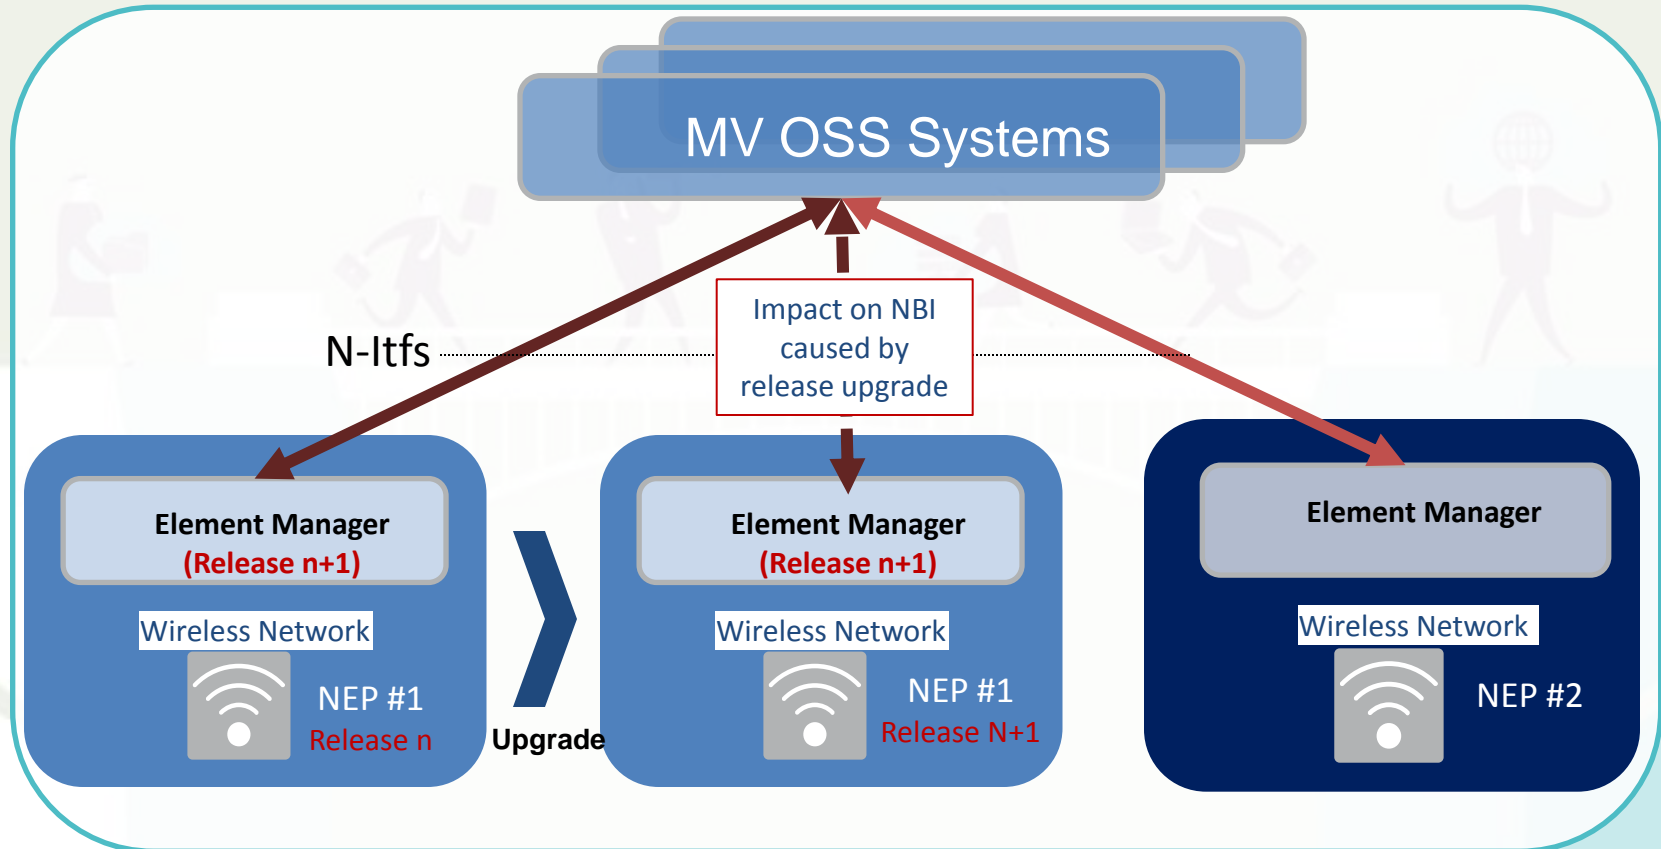

Possibility to develop and sell a „off-the-shelf product“

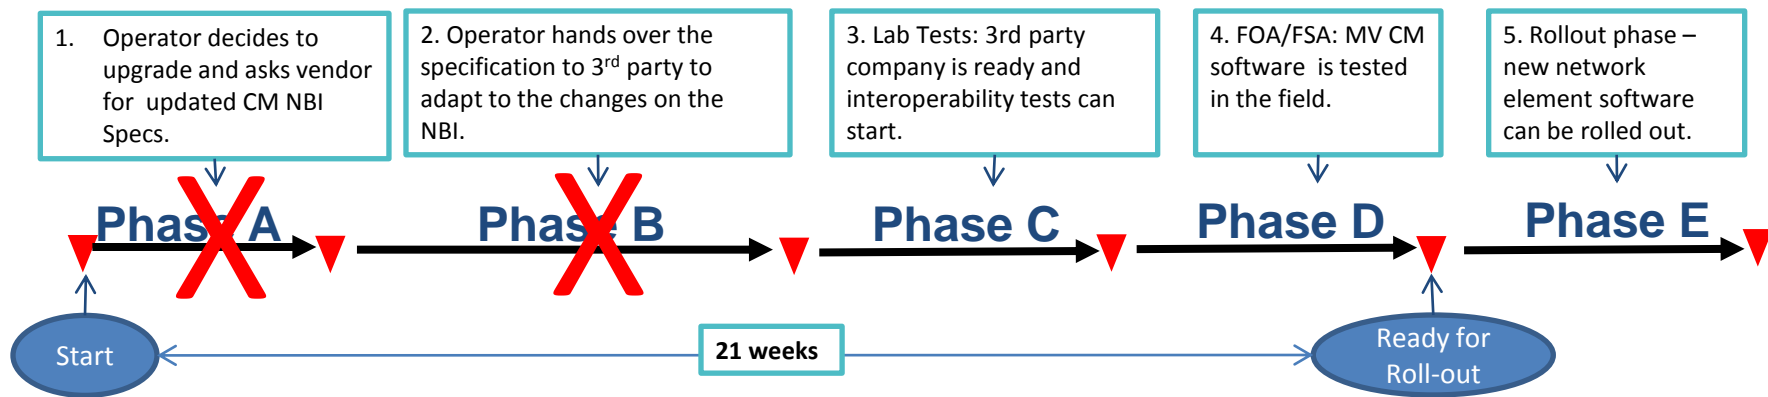

Optimize R&D resource planning

Speed up time to market

Operator challenge - Reduce t-t-m for upgrade

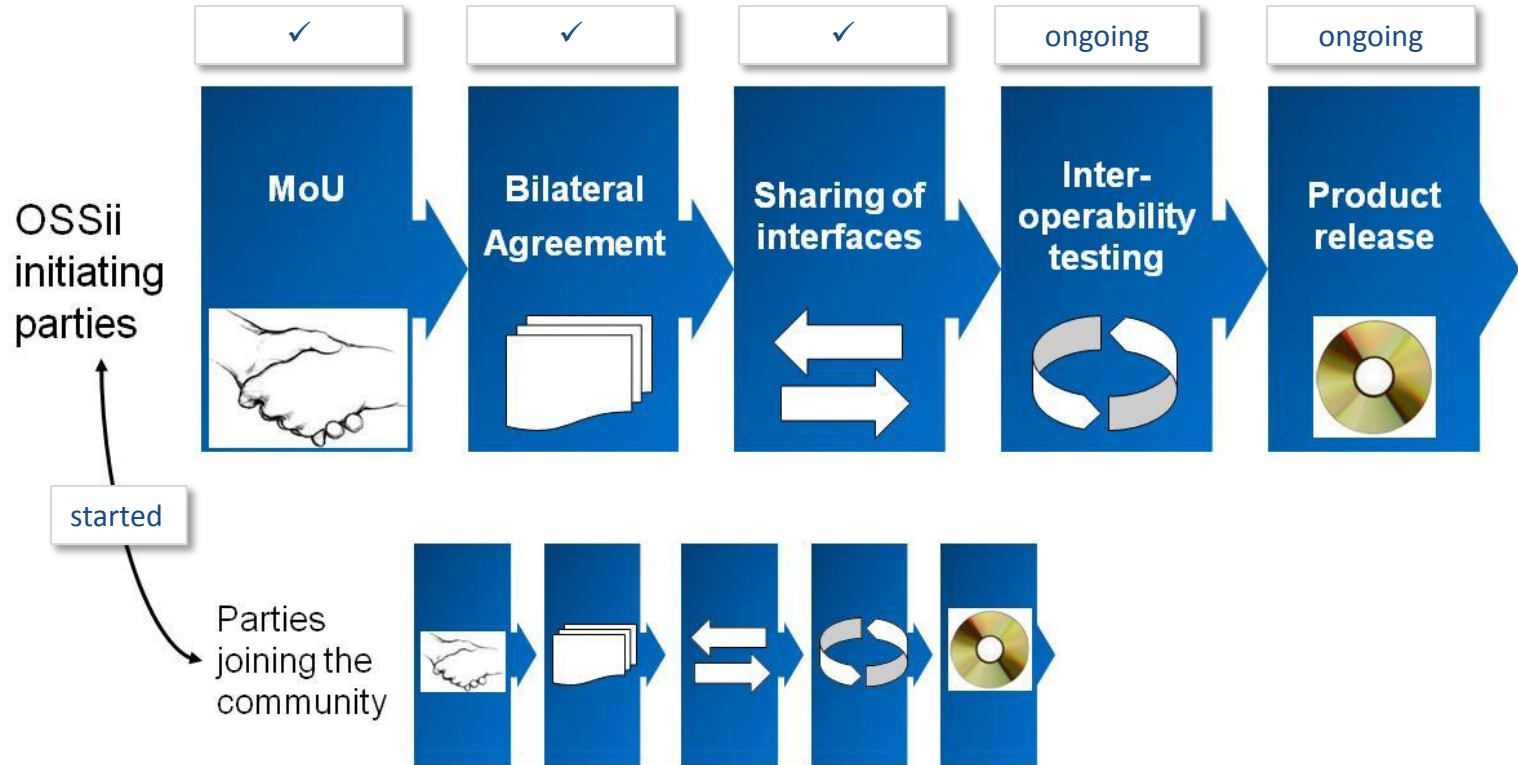

Real Example - Reduce t-t-m for upgrade

	Typical time needed for upgrade of existing release	With OSSii
Phase A „Planning“	3 weeks	0 weeks
Phase B „Development“	7 weeks	0 weeks
Phase C „Lab Tests“	5 weeks	<<5weeks
Phase D „FOA (Firstoffice/site application)“	6 weeks	< 6 weeks

How to join OSSii

What has been achieved so far (Status Jan 2015)

2014:

Feb: Bi-lateral agreement was signed between the initiating parties for PM,FM and CM

Feb: Bi-lateral agreement was signed between the initiating parties for PM and FM

May: Bi-lateral agreement was signed between the initiating parties for Trace/Events

June: Bi-lateral agreement was signed between the initiating parties for CM and Trace/Events

June: Exchange of interface documentation done between the initiating parties

July: Set-up of portals to share interface documentation done between the initiating parties

Oct-January 2015: Interoperability Tests Nokia-E///, Huawei-Nokia, Huawei-E///

2013:

MoU was signed on May 8th, 2013 by all the parties (Nokia, E///,Huawei)

Anti-trust external analysis done by all parties. Law-firms did not find OSSii in conflict with competition law

Q&A published on May 13th, 2013

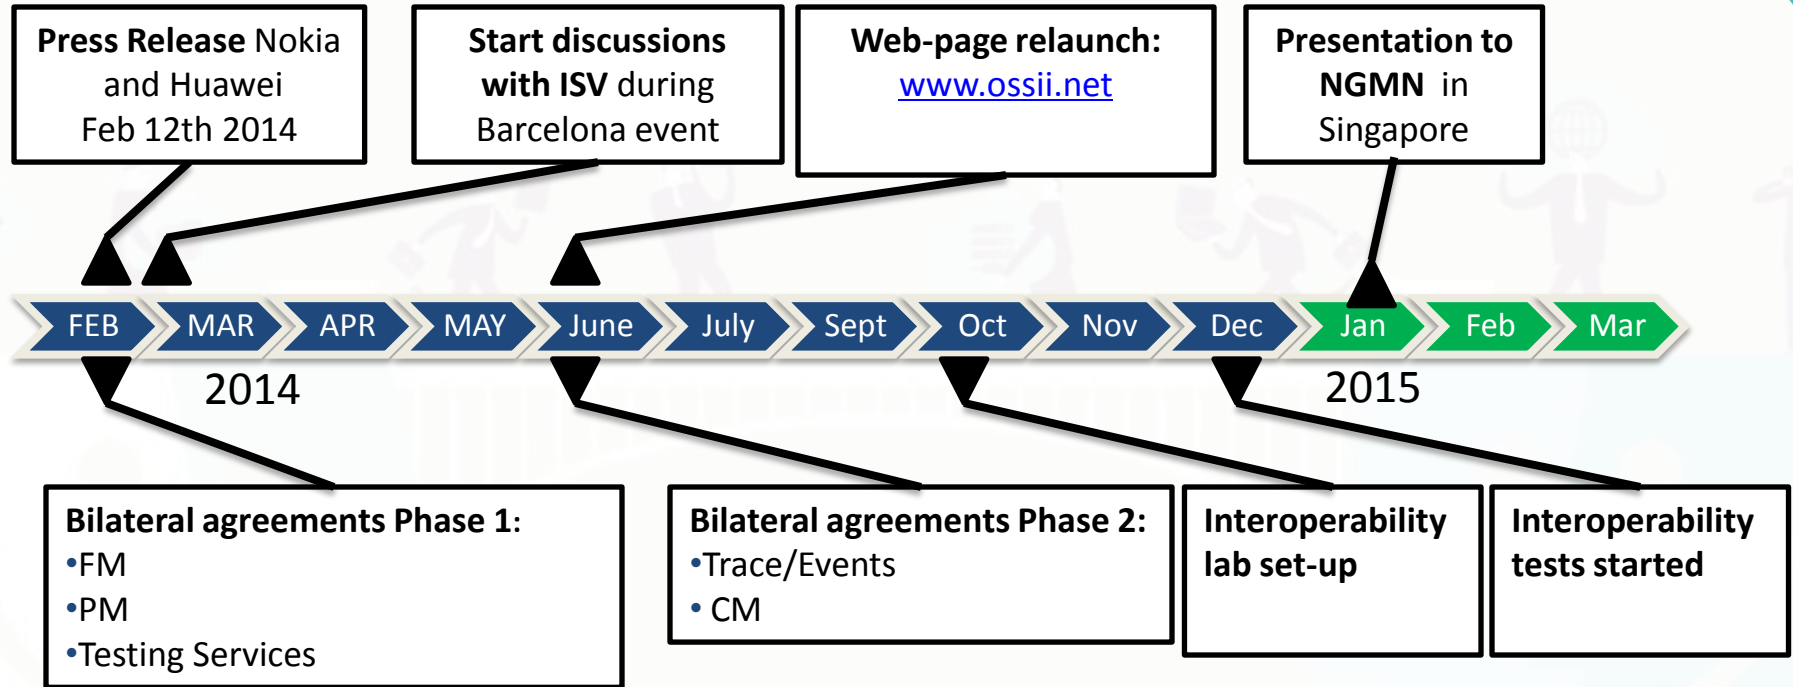

Seperate Press releases were published on May 13th, 2013 by each party

Portal: www.ossii.net went online on May 13th, 2013

Press Conference/Q&A Session held during TMF in Nice, May 14th-16th 2013

All signing parties will be present and answer questions to interested companies and parties.

Timeline OSSii

3rd Party Vendor Progress

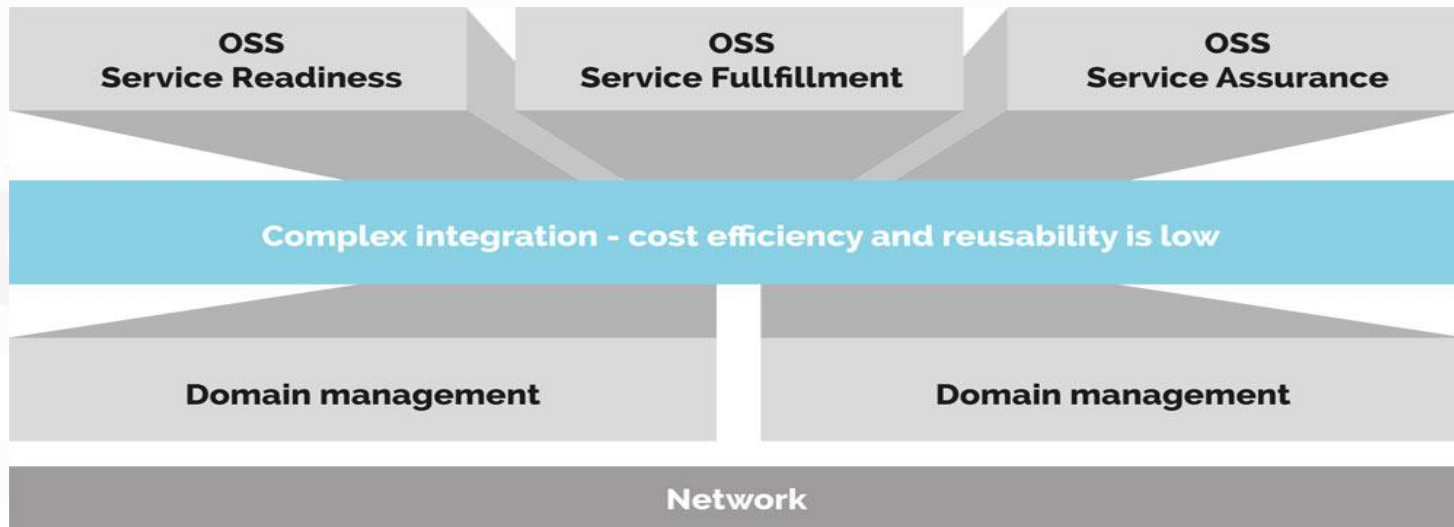

- Big interest from major 3rd party players
- Detailed discussions ongoing with >10 3rd parties
- First agreements are expected soon

Thanks for your attention!

The background features a light beige gradient. A horizontal bridge with a white railing spans the middle. On the bridge, several stylized business figures in purple suits are depicted in various poses: one with a speech bubble, one carrying a box, one running with a briefcase, one using a telescope, one carrying a stack of papers, one running with a laptop, one holding a globe, and one on a phone. Below the bridge, two large, stylized faces in light blue and teal are visible, each with a yellow circular eye and a curved line for a smile. The URL 'www.ossii.net' is centered in blue text with a blue underline.

www.ossii.net

What OSSii tries to solve

Scope:

- OSS north bound radio and core: FM - PM – CM - event/trace interfaces including updates/upgrades, and one earlier release
- Related interface and interoperability testing specifications
- Interoperability testing services
